1 General

AsciiDoc2Go is a portable version of asciidoc with all necessary software components included in one package.

2 Motivation for AsciiDocToGo

The first steps with asciidoc are pretty easy. Just grab python and asciidoc and you are done. If you would like to use the more advanced features and optional packages like syntax highlighting for source code or the diagram tools like dot, blockdiag, matplotlib, etc. it becomes pretty hard to get the job done. Also some filters needs external programmes and asciidoc is not very verbose about what dependencies have to be solved. A lot of the software delivered with AsciiDocToGo was found by source code analysis.

It will go even worse if one would like to create docbook pdf's, because a complete LaTeX-Toolchain is needed and the dblatex installer is/was broken.

AsciiDocToGo have all this in a predefined environment and adds also a shell menu in the windows explorer, so that you can just right click a txt file and create a document out of it.

It takes over a month to create the AsciiDocToGo package as it is now.

3 About AsciiDocToGo

Projectwebsite

<http://dbcb.github.io/asciidocToGo>

Repository

<https://github.com/dbcb/asciidocToGo>

License

[AsciiDocToGo and third party packages Licenses](#)

User Manual

[./Manual.html](#)

4 Included Software packages

- [python 2.7.6](#)
 - [AsciiDoc 8.6.9](#)
 - [Miktex 2.9.5105](#)
 - [graphviz 2.3.8](#)
 - [highlight 3.1.8](#)
 - [matplotlib 1.3.1](#)
 - [numpy 1.8.1 \(1\) numpy 1.8.1 \(2\)](#)
 - [mpl SHA-1:75f0d009629f93f33fab04b83faca20cc35dd358::](#)
 - [mathml](#)
 - [xsltproc 1.1.26](#)
 - [docbook 1.78.1](#)
-

- [dblatex 0.3.4](#)
- [lynx 2.8.8](#)
- [diag_filter](#)
- [blockdiag 1.3.3](#)
- [Pillow 2.4.0](#)
- [actdiag 0.5.1](#)
- [seqdiag 0.9.0](#)
- [nwdiag 1.0.0](#)
- [Webcolors 1.4](#)
- [funcparserlib 0.3.6](#)
- [pyparsing 2.0.2](#)
- [six 1.7.2](#)
- [PySide 1.2.2](#)
- [ply 3.4](#)
- [setuptools 4.0.1](#)

4.1 Not (yet) included Software Packages

- w3m:: <http://sourceforge.net/projects/w3m/files/w3m/>
Lynx is used instead
- epubcheck:: <https://github.com/IDPF/epubcheck>
This program needs java and i don't want to include another scripting language.
- dita 0.9:: http://sourceforge.net/projects/ditaa/files/ditaa/0.9/ditaa0_9.zip/download
- LatexMathML, AsciiMathML:: The option "-a asciimath" doesn't work.
- Latexmath:: Needs latex2png → Next version

5 TODO:

qrencode: <https://code.google.com/p/qrencode-win32/>

6 MikTeX

Some packages are missing in miktex and have to be manually installed.

- See: <http://latex-community.org/home/news/46-news-latex-distributions/469-miktex-amsmath>

Install them with mpm_mfc_admin.exe!

Miktex can't install packages:

- <http://entangled.wordpress.com/2009/09/18/installation-of-miktex-2-8-failed/#comment-1748>
-

7 Example of AsciiDocToGo

7.1 Source Code Highlighting

AsciiDocToGo use highlight.exe for syntax highlighting of source code

```
int Test(void)
{
    // SomeCode
}
```

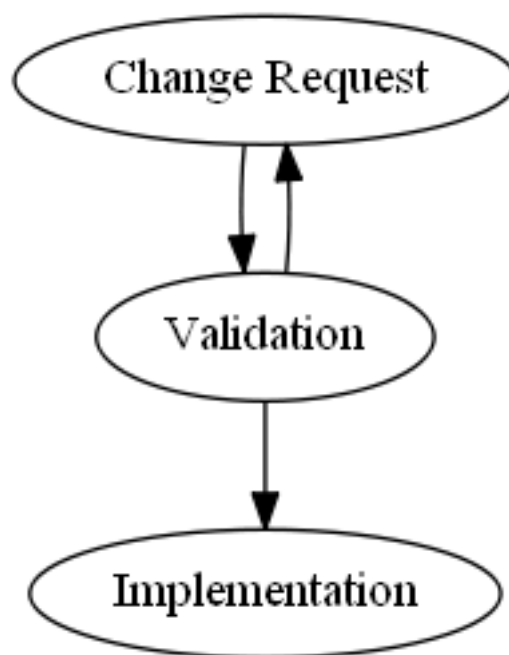

7.2 Mathplotlib

AsciiDocToGo has build in support for mathplotlib

7.3 Graphviz (Dot)

Diagramms printed with dor

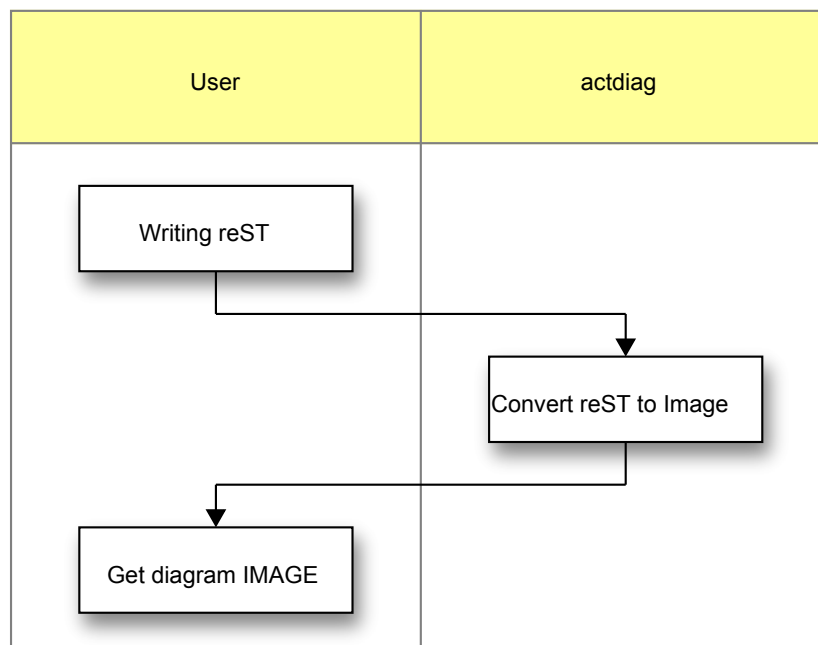

7.4 Blockdiag

Diagramms printed with blockdiag. Refer to the following link for more examples: [Examples](#) " "

7.5 actdiag

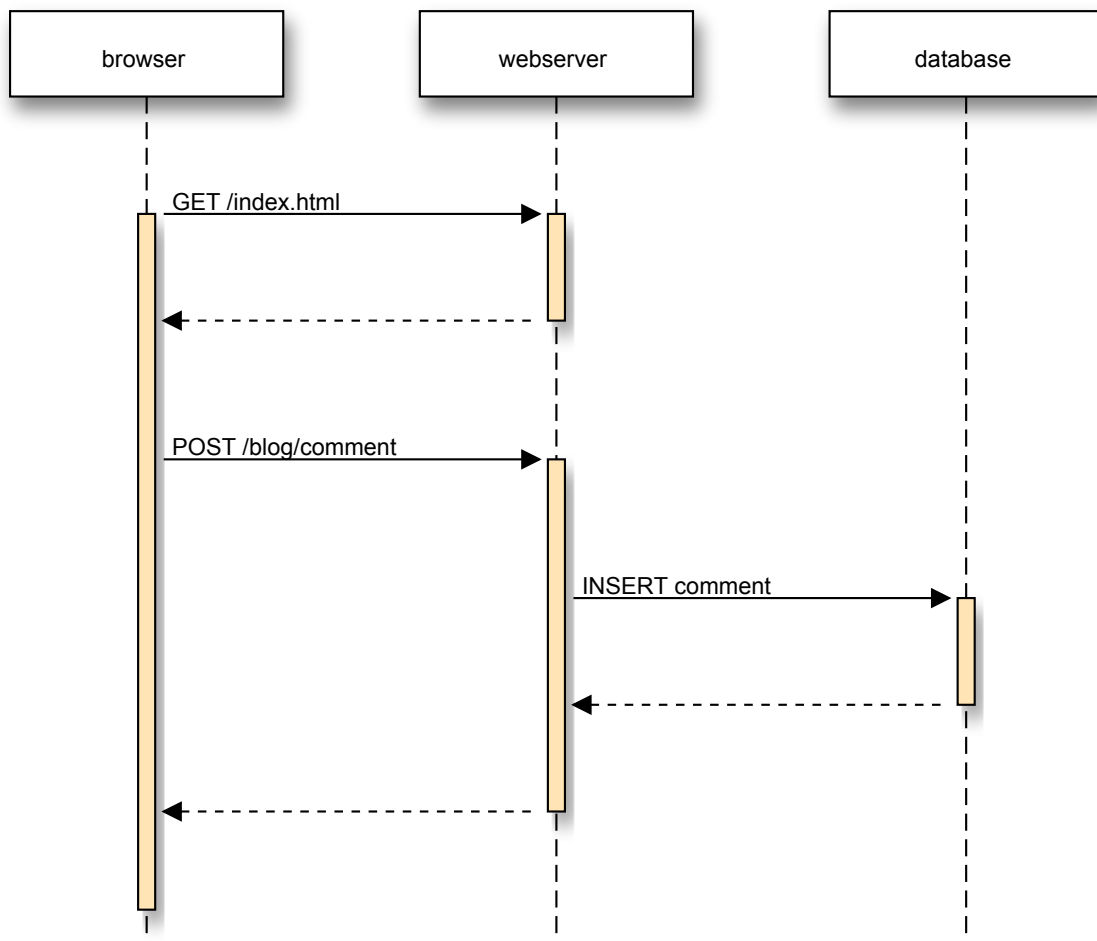

Diagramms printed with actdiag. Refer to the following link for more examples: [Examples](#) " "

7.6 SeqDiag

Seqdiag Is a dRrawing engine for sequence diagrams.

Refer to "[Seqdiag Webpage](#)" " "

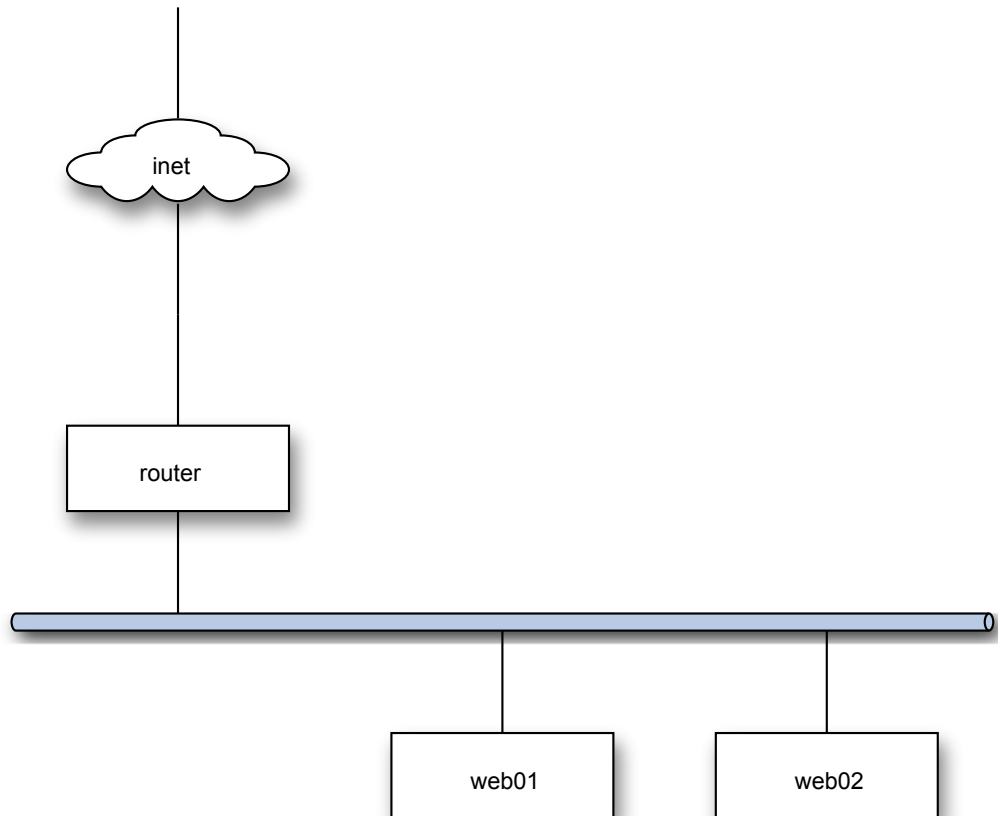

7.7 NwDiag

NwDiag is used to draw network related stuff like:

- Networks topology,
- IP-Ranges,
- Protocols,
- ...

Refer to "[nwdiag website](#)" " "

7.8 PacketDiag

PacketDiag is a diagram tool for any kind of digital network protocols.

Please refer to: [PacketDiag Website](#) " "
